ERM places an extraordinary focus on our Health, Safety and Environment (HSE) commitments as we serve our clients from over 150 offices around the world. ERM Partners, as our leaders, are directly accountable for our performance and work together with ERM colleagues globally to minimize our impact on the environment and ensure that all ERM employees, contractors and other stakeholders return home safe and healthy every day.

As evidence of these commitments to Health, Safety and Environment:

- We ensure world-class HSE performance as the most important outcome for every ERM activity;
- We provide HSE systems, processes, procedures, equipment and training for all ERM employees, enabling our work to be performed in a responsible manner;
- We assess identifiable HSE risks before commencing work and take actions to monitor, manage and reduce those risks;
- We operate in compliance with applicable HSE legislation, regulations, client policies and procedures, ERM policies and relevant external international standards;
- We empower every ERM employee with the authority to stop any ERM controlled work activity which they believe presents a danger to themselves, personnel under ERM control, the public or the environment;
- We establish clear, global HSE objectives to drive towards zero employee injuries and occupational illnesses and minimize adverse environmental impacts associated with our activities; and
- We believe in sharing our HSE learnings throughout ERM and with interested ERM stakeholders in order to improve continuously based upon our experiences.

These HSE commitments are reflected in the values of ERM and are implemented through our Safety Policy, Safety Management System and Sustainability Program.

Keryn James
Chief Executive Officer
