FINAL REPORT

Environmental and Social Impact Assessment for the Gamsberg Zinc Mine and Associated Infrastructure in the Northern Cape

Black Mountain Mining (Pty) Ltd

June 2013

Prepared by: Tania Swanepoel and Stuart Heather-Clark

For and on behalf of
Environmental Resources Management

Approved by: Mr Stuart Heather-Clark

Signed: [Signature]

Position: Partner in Charge

This report has been prepared by Environmental Resources Management the trading name of Environmental Resources Management Southern Africa (Pty) Limited, with all reasonable skill, care and diligence within the terms of the Contract with the client, incorporating our General Terms and Conditions of Business and taking account of the resources devoted to it by agreement with the client.

We disclaim any responsibility to the client and others in respect of any matters outside the scope of the above.

This report is confidential to the client and we accept no responsibility of whatsoever nature to third parties to whom this report, or any part thereof, is made known. Any such party relies on the report at their own risk.
CONTENTS

1 INTRODUCTION 1-1

1.1 PURPOSE OF REPORT 1-3
1.2 BACKGROUND TO THE PROJECT 1-3
1.3 CURRENT OPERATIONS 1-4
1.4 PROJECT APPLICANT AND PROPERTY DETAILS 1-5
  1.4.1 Property Details 1-5
  1.4.2 Holder of the Mining Right 1-8
1.5 ASSUMPTIONS AND LIMITATIONS 1-8
1.6 DETAILS OF THE ESIA PROJECT TEAM 1-9
1.7 STRUCTURE OF THIS REPORT 1-10

2 ADMINISTRATIVE FRAMEWORK 2-1

2.1 NATIONAL LEGISLATIVE REQUIREMENTS 2-1
  2.1.1 The Constitution of the Republic of South Africa (No. 108 of 1996) 2-1
  2.1.2 National Environmental Management Act (No. 107 of 1998) 2-2
  2.1.3 National Environmental Management: Waste Act, 2008 (No. 59 of 2008) 2-12
  2.1.4 Mineral and Petroleum Resources Development Act (No. 28 of 2002) 2-14
  2.1.5 National Heritage Resources Act (No. 25 of 1999) 2-15
  2.1.6 National Environmental Management: Air Quality Act, 2008 (No. 39 of 2008) 2-18
  2.1.7 National Water Act (No. 36 of 1998) 2-18
  2.1.8 The National Environmental Management: Biodiversity Act, 2008 (No. 10 of 2004) 2-21
  2.1.9 Integrated Legislative Processes 2-22
2.2 BROADER POLICY AND PLANNING CONTEXT 2-25
  2.2.1 Northern Cape Provincial Growth and Development Strategy (2011) 2-25
  2.2.2 The Northern Cape Provincial Spatial Development Framework (2012) 2-25
  2.2.3 Namakwa District Municipality Local Economic Development Strategy (2007) 2-26
  2.2.4 Khai Ma Integrated Development Plan (2006-2011) 2-28
  2.2.5 Khai Ma Rural Spatial Development Framework Plan (2010) 2-28
  2.2.6 Need and Desirability Guidelines 2-30
2.3 INTERNATIONAL GUIDELINES 2-30
  2.3.1 IFC Performance Indicators for Sustainability 2-30
2.4 INTERNAL CORPORATE STANDARDS 2-31
  2.4.1 Vedanta’s Corporate Standards 2-31

3 PROJECT DESCRIPTION 3-1

3.1 INTRODUCTION 3-1
  3.1.1 Background to Project 3-1
  3.1.2 Project Location 3-2
  3.1.3 Overview of Project 3-2
  3.1.4 Global Demand 3-3
  3.1.5 Proposed Project timeframes 3-5
3.2 CONSTRUCTION PHASE 3-7
  3.2.1 Job Creation during the Construction Phase 3-7
3.2.2 Construction Camp Infrastructure (Office, Workshop, Temporary Storage of Fuels and Wastes) 3-8
3.2.3 Contractor Housing Camp (Temporary Staff Housing) 3-8
3.2.4 Bulk Service Requirements for the Construction Camp and Temporary Contractor Housing Camp 3-8
3.2.5 Non-mineral Waste Management 3-12
3.3 MINING PHASE 3-12
3.3.1 Open Pit 3-13
3.3.2 Explosive Storage Area and Ammonium Nitrate and Emulsion Silos 3-14
3.3.3 Drilling and Blasting 3-15
3.3.4 Load and Haul of Overburden and Ore 3-15
3.3.5 Primary Crusher 3-16
3.3.6 Waste Rock Dumps 3-16
3.3.7 Earth Moving Equipment 3-17
3.3.8 Engineering Workshops 3-17
3.3.9 Mine Bulk Fuel and Lubricant Storage Facility 3-18
3.3.10 Conveyor System Network 3-18
3.4 PROCESSING CONCENTRATOR PLANT 3-18
3.4.1 Primary Crusher Plant 3-21
3.4.2 Milling Circuit 3-22
3.4.3 Ore Stockpile Pads 3-23
3.4.4 Flotation 3-23
3.4.5 Dewatering, Filtration and Zinc Concentrate Handling 3-24
3.4.6 Tailings Dam 3-25
3.4.7 Pollution Control Dams 3-26
3.4.8 Concentrator Plant Bulk Fuel and Lubricant Storage Facilities 3-26
3.4.9 Material Lay Down and Storage Areas 3-26
3.4.10 Equipment Wash Areas 3-27
3.4.11 Additional On-Site Plant Infrastructure 3-27
3.5 ASSOCIATED MINE INFRASTRUCTURE 3-27
3.5.1 Power Supply and Substation Network 3-28
3.5.2 Water Supply System and Storage Dams 3-28
3.5.3 Waste and Wastewater Facilities 3-29
3.5.4 Road Network 3-31
3.6 RESIDENTIAL HOUSING DEVELOPMENT 3-33
3.6.1 Bulk Service Requirements for the Employment and Residential Housing Development 3-33
3.7 TRANSPORT OPTIONS 3-35
3.7.1 Transport Option 1: Truck via N14 and N7 National Road to Port of Saldanha 3-35
3.7.2 Transport Option 2: Truck to Loop 10 via existing Proclaimed Road (RL(P)5/2002) and then by Sishen-Saldanha Railway Line to Port of Saldanha 3-36
3.8 EXPORT OPTIONS 3-40

4 CONSIDERATION OF ALTERNATIVES 4-1
4.1 INTRODUCTION 4-1
4.2 MITIGATION HIERARCHY: AVOIDANCE, PREVENTION AND MINIMIZATION OF IMPACTS 4-1
4.3 SUMMARY OF ALTERNATIVES FROM PREVIOUS EIA (SRK CONSULTING, 2000) 4-2
4.4 ANALYSIS OF OPEN PIT AND UNDERGROUND MINING TECHNIQUES 4-6
4.4.1 Open Pit VS Underground Mining 4-7
4.5 ALTERNATIVES CONSIDERED FOR OPEN PIT TECHNIQUE 4-8
4.5.1 Habitat Sensitivities 4-11
4.5.2 Archaeological/Heritage Sensitivities 4-14
4.5.3 Noise and Vibration Sensitivities 4-14
4.5.4 Hydrological Sensitivities 4-17
4.5.5 Visual Sensitivities 4-17
4.6 OUTCOMES OF AVOIDANCE 4-17
4.6.1 Waste Rock Dump Options 4-17
4.6.2 Tailings Dam Options 4-19
4.6.3 Contractor Area and Plant 4-20
4.6.4 Open Pit 4-21
4.7 ADDITIONAL INFRASTRUCTURE LOCATION ALTERNATIVES 4-24
4.7.1 Access Roads 4-24
4.7.2 Location of Primary Crusher 4-24
4.7.3 Location of Engineering Workshop 4-25
4.8 SUMMARY OF ALTERNATIVES CONSIDERED 4-25
4.8.1 Refinement of Project Design 4-29
4.8.2 Comparative Analysis of Alternatives from the Previous and Current ESIA Process 4-31
5 BIOPHYSICAL RECEIVING ENVIRONMENT 5-1
5.1 CLIMATE CONDITIONS 5-1
5.1.1 Precipitations 5-1
5.1.2 Maximum and Mean Monthly Temperatures 5-3
5.1.3 Monthly Mean Wind Direction and Speed 5-6
5.1.4 Evaporation 5-7
5.1.5 Relative Humidity 5-7
5.1.6 Flooding 5-7
5.2 TOPOGRAPHY 5-10
5.3 GEOLOGY 5-10
5.3.1 Regional Geology 5-10
5.3.2 Local Mine Geology 5-11
5.3.3 Geochemical Context of the Gamsberg Deposit 5-15
5.4 SOIL POTENTIAL 5-15
5.4.1 Soil Forms 5-15
5.4.2 Agricultural Potential 5-16
5.5 SURFACE WATER 5-16
5.5.1 Catchment Area Characteristics 5-16
5.5.2 Site Specific Water Resources 5-19
5.5.3 Water Quality Management and Sources of Contamination 5-21
5.6 GROUNDWATER 5-21
5.6.1 Description of Hydrogeology 5-21
5.6.2 Current Groundwater Use 5-22
5.6.3 Groundwater Quality 5-22
5.6.4 Groundwater Levels and Flow Directions 5-23
5.7 GEOCHEMISTRY 5-23
5.7.1 Waste rock 5-23
5.7.2 Tailings 5-24
5.8 FLORA 5-26
5.8.1 The Gamsberg Inselberg in a Regional Context 5-26
5.8.2 Regional Botanical Analysis
5.8.3 Site Specific Botanical Analysis
5.8.4 On-Site Features of Botanical Concern
5.8.5 Off-site Features of Botanical Concern
5.8.6 Critical Biodiversity Areas and Broad-Scale Processes
5.9 FAUNA
5.9.1 Terrestrial Invertebrates
5.9.2 Amphibians
5.9.3 Reptiles
5.9.4 Avifauna
5.9.5 Mammals
5.9.6 Aquatic Biodiversity
5.9.7 Assessment of Faunal Species and Species-specific Habitats
5.10 AIR QUALITY
5.10.1 Existing Air Quality within the Region
5.11 NOISE
5.12 BASELINE CONDITIONS AT LOOP 10

6 SOCIO-ECONOMIC ENVIRONMENT

6.1 INTRODUCTION
6.1.1 Methodology
6.1.2 Overview
6.2 ADMINISTRATIVE STRUCTURE
6.2.1 Northern Cape Province
6.2.2 Namakwa District Municipality
6.2.3 Local Municipalities
6.2.4 Political Administration
6.3 PROJECT AREA OF INFLUENCE
6.3.2 Settlements in the Project’s Area of Influence
6.4 POPULATION STATISTICS
6.4.1 Age
6.4.2 Gender
6.5 RACE, ETHNICITY AND LANGUAGE
6.6 EDUCATION
6.6.1 Education Bursaries
6.6.2 Options for Post-School Study
6.6.3 Skills
6.7 HEALTH
6.7.1 Health Facilities
6.7.2 State of Health
6.7.3 Communicable Diseases (HIV/AIDS, TB)
6.8 DESCRIPTION OF THE BASELINE ECONOMIC ENVIRONMENT
6.8.1 Economic Output, Growth and Development Trends
6.8.2 Key Sectors of Namakwa District Municipality
6.8.3 Other Sectors
6.8.4 Regional Employment
6.8.5 Dependency
6.8.6 Income Levels
6.8.7 Natural Resource Use
6.9 SOCIAL CHALLENGES AND VULNERABILITY
8.6 CONCLUSION

9 BIOPHYSICAL IMPACT ASSESSMENT

9.1 IMPACT ON AIR QUALITY

9.2 IMPACT ON GROUNDWATER

9.2.1 Impact of Drawdown on the Groundwater Resource

9.2.2 Impact of Drawdown on Groundwater Users

9.2.3 Impact on Groundwater Quality

9.2.4 Impact of Water Quality on Groundwater Users

9.3 IMPACTS ON BIODIVERSITY

9.3.1 Habitat Loss Caused by the Mine Footprint and Associated Activities

9.3.2 Impacts Resulting from Habitat Degradation from Dust Deposition

9.3.3 Habitat Degradation Impacts Resulting from Groundwater Drawdown

9.3.4 Impacts Arising from Habitat Fragmentation

9.3.5 Impacts on Species Diversity as a result of Mining-related Activities

9.3.6 Impacts from Encroachment of Alien Species

9.3.7 Impacts of Human Influx on Biodiversity

9.4 SUMMARY OF BIODIVERSITY IMPACTS

9.4.1 Cumulative Impacts on Biodiversity

9.4.2 Residual Negative Impacts and Potential for Offsets

9.5 IMPACT ON SURFACE HYDROLOGY

9.5.1 Removal and Alteration of Natural Water Courses

9.5.2 Impact of Reduced Peak Runoff and Discharge Volumes on Water Courses

9.5.3 Impact of Reduction in Mean Annual Runoff

9.5.4 Impact of Increased Sediment Yield on Surface Water Quality

9.5.5 Impact of Increased Pollutant Load on Surface Water Quality

9.6 NOISE AND VIBRATION IMPACTS

9.7 CLIMATE CHANGE IMPACTS

9.7.1 Climate Change-induced Risks on the Project

9.7.2 Impact of Project GHG Emissions on South Africa’s National Emissions

10 SOCIO-ECONOMIC IMPACT ASSESSMENT

10.1 IMPACT ON ECONOMIC ENVIRONMENT

10.1.1 Impacts linked to Project Expenditure

10.1.2 Impacts on Key macro-Economic Variables

10.1.3 Impacts on Tourism

10.1.4 Impacts on Surrounding Land Uses

10.1.5 Impacts on Municipal Services

10.2 IMPACT ON SOCIAL ENVIRONMENT

10.2.1 Key Social Considerations

10.2.2 Employment

10.2.3 Training and Skills Development

10.2.4 Procurement of Goods and Services

10.2.5 Economic Diversification

10.2.6 Unmet Expectations and Potential for Social Unrest

10.2.7 Increased Pressure on Infrastructure and Services (Direct)

10.2.8 Road Infrastructure and Transport (Direct)

Box 10.66  Summary of Decommissioning Impact: Cultural Heritage Resources
Box 10.67  Construction and Operational Impact: Damage to or Destruction of Paleontological Heritage Resources
GLOSSARY OF TERMS

“alternative”, in relation to a proposed activity, means different means of meeting the general purpose and requirements of the activity, which may include alternatives to-(a) the property on which or location where it is proposed to undertake the activity; (b) the type of activity to be undertaken; (c) the design or layout of the activity; (d) the technology to be used in the activity; (e) the operational aspects of the activity; and (f) the option of not implementing the activity.

“aquifer” means a geological formation which has structures or textures that hold water or permit appreciable water movement through them.

“biodiversity” (“biological diversity” or “biodiversity”) means the variability among living organisms from all sources including, terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are part and also includes diversity within species, between species, and of ecosystems.

“buffer area” means, unless specifically defined, an area extending 10 kilometres from the proclaimed boundary of a world heritage site or national park and 5 kilometres from the proclaimed boundary of a nature reserve, respectively, or that defined as such for a biosphere.

“catchment” The area from which any rainfall will drain into the watercourse or watercourses or part of the water course, through surface flow to a common point or common points.

“clean water system” includes any dam, other form of impoundment, canal, works, pipeline and any other structure or facility constructed for the retention or conveyance of unpolluted water.

“concentration” Concentrating involves milling, crushing and flotation of the ore to produce a concentrate for smelting. The ore is crushed and milled to reduce the size of the rock particles and to expose the minerals which contain the PGMs. The particles are mixed with water and special reagents and air is pumped through the liquid, creating bubbles to which the PGM-containing particles adhere. These float to the surface and are removed as a soapy froth.

“construction” means the building, erection or establishment of a facility, structure or infrastructure that is necessary for the undertaking of a listed or specified activity but excludes any modification, alteration or expansion of such a facility, structure or infrastructure and excluding the reconstruction of the same facility in the same location, with the same capacity and footprint.

“dam” includes any settling dam, slurry dam, evaporation dam, catchment or barrier dam and any other form of impoundment used for the storage of unpolluted water or water containing waste.

“dirty area” means any area at a mine or activity which causes, has caused or is likely to cause pollution of a water resource.
“dirty water system” includes any dam, other form of impoundment, canal, works, pipeline, residue deposit and any other structure or facility constructed for the retention or conveyance of water containing waste.

“environment” The surroundings within which humans exist and that are made up of:

i. the land, water and atmosphere of the earth;
ii. micro-organisms, plant and animal life;
iii. any part or combination of (i) and (ii) and the interrelationships among and between them; and
iv. the physical, chemical, aesthetic and cultural properties and conditions of the foregoing that influence human health and well-being. This includes the economic, social, cultural, historical and political circumstances, conditions and objects that affect the existence and development of an individual, organism or group.

“environmental impact assessment” refers to the process of systematically identifying, predicting, assessing and reporting the potential positive and negative social, economic and biophysical impacts of any proposed project, plan, programme or policy which requires authorisation or permission by law and which may significantly affect the environment. The EIA includes an evaluation of alternatives, as well as recommendations for appropriate mitigation measures for minimising or avoiding negative impacts, measures enhancing the positive aspects of the proposal and environmental management and monitoring measures. Although recognised as an EIA process in a South African context, the EIA process for this project is referred to as an Environmental and Social Impact Assessment (ESIA) in line with International good practice.

“expansion” means the modification, extension, alteration or upgrading of a facility, structure or infrastructure at which an activity takes place in such a manner that the capacity of the facility or the footprint of the activity is increased.

“fault” a zone of displacement in rock formations resulting from forces of tension or compression of the earth’s crust.

“Formation” a general term used to describe a sequence of rock layers.

“fractured-rock aquifer” groundwater occurring in within fractures and fissures in hard-rock formations.

“freeboard” - with respect to water storage dams can be defined as the distance between the full supply level (spillway crest level) and the lowest point on the dam wall crest. Freeboard with respect to tailings dams can be defined as the distance between the mean operating level plus the 1:50 year flood-level and the lowest point on the wall crest of the tailings dam.

“groundwater flow” The movement of water through openings and pore spaces in rocks below the water table i.e. in the saturated zone. Groundwater naturally drains from higher lying areas to low lying areas such as rivers, lakes and the oceans. The rate of flow depends on the slope of the water table and the transmissivity of the geological formations.

“groundwater recharge” Refers to the portion of rainfall that actually infiltrates the soil, percolates under gravity through the unsaturated zone (also called the Vadose Zone) down to the saturated zone below the water table (also called the Phreatic
“habitat” means a place where a species or ecological community naturally occurs.

“Heavy metals” include the elements in the centre of the Periodic Table (Transition metals) and have a density of >3g/cm³. Common examples are V, Mn, Fe, Co, Ni, Cu, Zn, Ag, Cd, Au, Hg.

“hydrogeological” The study of distribution and movement of groundwater.

“hydrological” The study of movement, distribution and quality of surface water.

“impact” The positive or negative effects on human well-being and/or on the environment.

“interested and affected parties (I&APs)” any person, group of persons, organisation or any organ of state that may have jurisdiction over any aspect of/or whose interests may be positively or negatively affected by the proposal or activity and/or who are concerned with a proposal or activity and its consequences.

“Irreplaceable loss” a permanent impact that is impossible to replace if lost or damaged.

“natural habitat” Land and water areas where (i) the ecosystems’ biological communities are formed largely by native plant and animal species, and (ii) human activity have not essentially modified the area’s primary ecological functions. All natural habitats have important biological, social, economic, and existence value.

“mitigate” The implementation of practical measures to reduce adverse impacts or enhance beneficial impacts of an action.

“permeability” the ease with which a fluid can pass through a porous medium and is defined as the volume of fluid discharged from a unit area of an aquifer under unit hydraulic gradient in unit time (expressed as m³, m² or m/d). It is an intrinsic property of the porous medium and is independent of the properties of the saturating fluid; not to be confused with hydraulic conductivity, which relates specifically to the movement of water.

“porosity” Ratio of the volume of void space to the total volume of the rock or earth material.

“proponent” Black Mountain Mining (Pty) Ltd, part of the Vedanta Group plc, is applying for various environmental authorisations/permits/licences in terms of the relevant environmental legislation.

"phased activities" means an activity that is developed in phases over time on the same or adjacent properties to create a single or linked entity through interconnected internal vehicular or pedestrian circulation, sharing of infrastructure, or the continuum of design, style or concept by the same proponent or his or her successors.

“Prescribe” Means only as prescribe by regulation in the Government Gazette.

“Project” “As demarcated according to mining license boundaries – exclude the town, Eskom and those portions of the land under company charge where mining or accessory works are being carried out.
“**protected area**” means those protected areas contemplated in section 9 of the NEMPAA.

“**public participation process**” A process of involving the public in order to identify issues and concerns, and obtain feedback on options and impacts associated with a proposed project, programme or development. Public Participation Process in terms of NEMA refers to: a process in which potential interested and affected parties are given an opportunity to comment on, or raise issues relevant to specific matters.

“**reasonable measures**” - The measures that a reasonable (ordinary) person would regard necessary for the specific purpose. Reasonable person in this case would refer to a person with expertise in the specific field.

“**Regulator**” Means the government agent responsible for the application processing, permitting, implementation, control and prosecution of persons and their actions in order to adhere to a specific piece of legislation.

“**residual deposit**” means any residue stockpile remaining at the termination, cancellation or expiry of a prospecting right, mining right, mining permit, exploration right or production right.

“**residual stockpile**” means any debris, discard, tailings, slimes, screening, slurry, waste rock, foundry sand, beneficiation plant waste, ash or any other product derived from or incidental to a mining operation and which is stockpiled, stored or accumulated for potential re-use, or which is disposed of, by the holder of a mining right, mining permit or production right.

“**runoff**” All surface and subsurface flow from a catchment, but in practice refers to the flow in a river i.e. excludes groundwater not discharged into a river.

“**SANS Class 1**” South African National Standard 241:2006 for Drinking Water (Class 1).

“**saturated zone**” The subsurface zone below the water table where interstices are filled with water under pressure greater than that of the atmosphere.

“**scoping**” the process of determining the spatial and temporal boundaries (i.e. extent) and key issues to be addressed in an environmental assessment. The main purpose of scoping is to focus the environmental assessment on a manageable number of important questions. Scoping should also ensure that only significant issues and reasonable alternatives are examined.

“**significance**” significance can be differentiated into impact magnitude and impact significance. Impact magnitude is the measurable change (i.e. intensity, duration and likelihood). Impact significance is the value placed on the change by different affected parties (i.e. level of significance and acceptability). It is an anthropocentric concept, which makes use of value judgements and science-based criteria (i.e. biophysical, social and economic).

“**Social & Labour Plan (SLP)**” Plan required by the Department of Mineral Resources to outline a mine’s plan to align itself with the pillars of the Mining Charter.

“**Stakeholder**” A person, group or organization with the potential to affect or be affected by the process or outcome of mine closure.
“storage coefficient” the volume of water an aquifer releases from or takes into storage per unit surface area of the aquifer per unit change in head.

“test pumping” or aquifer testing is the process whereby an aquifer is subjected to pumping from a borehole under controlled test conditions in order to determine the hydraulic parameters of the groundwater system through its response to the stress of abstraction.

“total dissolved solids” It (often abbreviated TDS) is an expression for the total mass content of dissolved ions and molecules or suspended microgranules in a liquid medium.

“transmissivity” the rate at which a volume of water is transmitted through a unit width of aquifer under a unit hydraulic head (m²/d); product of the thickness and average hydraulic conductivity of an aquifer.

“Wetland” “wetland is the land which is transitional between dry and wet systems, where the water table is usually at or near the surface, or the land is periodically covered with shallow water and which supports or would support vegetation that is adapted to life in saturated soil (National Water Act 36 of 1998 In DWAF, 2005).
