**From:** Kasantha Moodley  
**Sent:** 07 February 2014 01:43 PM  
**To:** 'ElizabethW@frankwenforge.co.za'  
**Cc:** 'ashwin\_s@mtn.co.za'  
**Subject:** Proposed Acetylene Gas Manufacturing Facility

Dear Elizabeth,

Your objection to the proposed Acetylene Gas Manufacturing Facility has been noted. Thank you also for the information relating to the proposed developments at the Glen Douglas Mine.

As part of this EIA process, an Air Quality Impact Assessment is being undertaken to quantify and assess the potential emissions that may occur as a result of the proposed facility. Furthermore, air quality modelling will be undertaken to understand the status quo and the cumulative impact on air quality of the study area. This assessment will be made available during the EIA phase of the project.

Please note that the public meeting will be held on **20 February 2014 (Thursday)**.

We thank you for your participation in this process.

Kind Regards

**Kasantha Moodley**  
Senior Consultant

**From:** Kasantha Moodley  
**Sent:** 07 February 2014 01:10 PM  
**To:** jpvdmmerwe@telkomsa.net  
**Subject:** Proposed Acetylene Gas Production Plant

Dear Mr. van der Merwe,

Thank you for your call earlier this week.

Please find below a response to your comments and queries on the above-mentioned project.

**a) What emissions will be released from the plant into the air?**

Acetylene gas is likely to only be released during an emergency situation/incident. There would however be minor quantities of this gas released from the storage of calcium carbide, which is used to produce Acetylene Gas as well as from the filling of gas cylinders. Dust is also likely due to the movement of delivery vehicles to and from the site. To ensure environmental protection and safety, embedded controls (design measures) will be considered to reduce these air emissions (eg. Generator recycle system) . As part of this EIA process, an Air Quality Impact Assessment is currently underway to quantify and assess the potential emissions of gases/dust that may occur as a result of the proposed facility. The results of the Air Quality Impact Assessment will be made available during the EIA phase of the project.

**b) The area is already suffering from large quantities of dust from the mine and sand works. Furthermore, the rubber pyrolysis plant is also another source of air pollution in area. What impact will an acetylene plant have on the air quality of the area?**

As part of this EIA process, an Air Quality Impact Assessment is currently underway to quantify and assess the potential emissions of gases/dust that may occur as a result of the proposed facility. In addition, air quality modelling will be undertaken to understand the existing and cumulative impact on the study area. The results of the Air Quality Impact Assessment will be made available during the EIA phase of the project.

**c) What about leaks, fires and explosions?**

ERM is currently undertaking a Major Hazardous Installation (MHI) assessment to determine the risks of the proposed facility to the surrounding land-users. The proposed development site and layout has been selected to reduce the potential off-site risks to surrounding land-users. The results of the Major Hazardous Installation Assessment will be made available during the EIA phase of the project.

**d) The area of Daleside is part of the PWV Airshed Area. How can the local people allow more plants to be established here which will result in more air pollution?**

Air Products will be applying to the Sedibeng District Municipality for an Air Emissions Licence (AEL) which will consider the Vaal Triangle Air-Shed Priority Area Air Quality Management Plan (GNR. 613 of 2009). The Air Emissions Licence Application will be made available during the EIA phase of the project.

**e) There is something called cumulative impacts. How much will you add to an already impacted environment?**

Cumulative impacts will be addressed during the EIA phase of the project. The cumulative impact on air quality is considered to be of importance, and will be addressed as part of an Air Quality Impact Assessment which will include air quality modelling.

Please note that the public meeting will be held on the **20<sup>th</sup> of February 2014 (Thursday)**.

Thank you for your participation in this process.

Kind Regards

## Kasantha Moodley

---

**From:** Kasantha Moodley  
**Sent:** 07 February 2014 02:06 PM  
**To:** 'LesleyS@midvaal.gov.za'  
**Subject:** Proposed Acetylene Gas Manufacturing Facility

Dear Lesley,

Thank you for your comments received on the above-mentioned project.

Please find below a response to your comments:

- 1) A meeting and site visit has been scheduled for the **12<sup>th</sup> of February 2014** (Wednesday), all key authorities have been invited to this meeting, including the Midvaal LM, Sedibeng DM, GDARD, DWA, SAHRA and the Ward Councillor. I understand that Jako Verster will be attending the meeting from your Department.
- 2) An EIA and EMP will be developed as part of this process. It should also be noted that Air Products is certified for quality, environmental and health and safety management systems (ie ISO 9000, ISO 14001 and ISO 22000) and is also rated 5 Star by the National Occupational Safety Association (NOSA). Air Products therefore have various policies in place for the construction, operation and maintenance of Acetylene Gas Manufacturing Facilities, including those related to emergency planning. Please note that the Draft Scoping Report has been made available to your Department for review and comment. The commenting period closes on **26 February 2014**.
- 3) Air Products will ensure adherence to all relevant national, provincial and local legislation.
- 4) Air Products will be applying for an Air Emissions Licence with the Sedibeng District Municipality.

We thank you for your participation in this process.

Kind Regards  
**Kasantha Moodley**  
Senior Consultant
