

APPENDIX G: ECOLOGICAL SPECIES OF IMPORTANCE LIST

Species of conservation concern were considered to be those listed by conservation authorities as being on a 'Red List' and at risk of extinction and those listed by National or Regional legislation as being protected. Red List plant species were obtained from the SANBI website, it must be noted however that the conservation status listed by SANBI considers only the populations of species within South Africa's geopolitical borders and does not take into account the global population size for non-endemic species. The regional or national assessment of a species may therefore differ to the global status on the IUCN Red List. While the Red List plant species that may occur on the project site was used to inform the impact assessment, the list has been withheld from this document and do not appear in the appendix as these species may be prone to illegal harvesting and must be protected.
